

Wind power helping people overseas

What can we do for our global economy? After all, we're in good shape. Our house is in order. Our children are fed. We have nothing better to do with resources than donate them to offshore/foreign investors.

Let's ask them, what can we do? We've discovered a new raw resource. It's not gold, not oil, not lumber, not virgin soil. It's the recently recognized wind. Let's give it to Spain, let's give it to Britain. Let's give it to Scotland. We have lots of wind.

Since money is the most important thing in the world, (God bless it) let's know how much we're giving. Let's increase our stature by the size of our gift.

If you take a 1.5 megawatt tower which grosses \$200,000 per year, there will be unavoidable expense, but the rest can go to Accion or BP or PPM to help the people with health or education issues. Naturally, we're all set. We don't need help.

You can feel good about supporting these people every time you pay your electrical bill and your taxes. A 40-year plan like this will float all boats.
